Men and women with HIV are 50–100% more likely to develop heart disease. The REPRIEVE clinical research trial may help people get in front of this problem.

What is REPRIEVE?

REPRIEVE is a clinical research trial testing whether a daily dose of a statin medication (pitavastatin) lowers the risk of heart-related disease among people living with HIV.

LENGTH OF PARTICIPATION

48 months on average

SIMPLE TIME COMMITMENT

Visits about **3** times per year

THERE'S A SITE NEAR YOU

To learn more about the trial and find a site near you, visit us at www.reprievetrial.org

Pitavastatin is a medication approved for treatment of high cholesterol. In the REPRIEVE trial, we will test whether pitavastatin can prevent heart disease in HIV.

Am I eligible?

- HIV-positive between ages 40 and 75
- On antiretroviral therapy (ART) for at least 6 months prior to study entry
- No history of cardiovascular disease (including heart attack or stroke)
- Not currently using a statin drug

Answers to questions about statins:

- ♥ Statins are among the most commonly prescribed class of medicines.
- ♥ Pitavastatin, the statin medication used in REPRIEVE, has been shown to lower cholesterol without increasing blood sugar among people living with HIV.
- ♥ Pitavastatin is safe for use with any combination antiretroviral therapy regimen.

You can join the movement to help us understand whether this drug prevents heart disease and other chronic complications among people living with HIV!

Why should I participate?

By participating in REPRIEVE, you will be:

Helping us understand whether pitavastatin prevents heart-related disease among people living with HIV.

Pay it forward, help to make it possible for people with HIV to live longer and healthier lives.
